## Sinar f3 View Camera

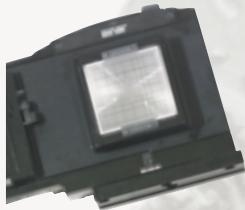

For digital and analog photography

## Sinar f3: Perfect Settings

The compact Sinar f3 is the ideal view camera for "on location" shoots. With the unique Sinar setting technique, even complex subjects can be photographed with ease and precision. Depth of field, tilt- and swing angles can be determined exactly by means of the corresponding scales. This quickly and systematically leads to perfect settings without moving the attention away from the subject. Modular construction allows optional extensions of the optical bench as well as the use of a variety of lenses and useful accessories from the extensive Sinar System.

*The large, bright focusing screen measures 56 × 56 mm (~2 1/4" × 2 1/4")*

## Sinar f3: Digital and Analog

In addition to Hasselblad roll film magazines, all digital backs with the Hasselblad V connecting system can be used on the Sinar f3. The camera is equipped with integrated contacts and electric bellows. That makes it possible to control the Sinar electronic between-the-lens shutters without additional cables. With Sinar digital backs and the live focusing image, sharpness can be set on the sensor with pixel accuracy. Focusing can also be performed by means of the focusing screen, which is particularly useful when bright ambient light makes it difficult to work with the computer screen.

With this well thought-out view camera, the Sinar System has been further expanded with an ideal working instrument for analog and digital applications in formats up to 6 × 6 cm (2 3/8" × 2 3/8").

**Photograph complex subjects with professional competence** – thanks to the adjustment capabilities of the view camera and the unique Sinar setting technique.

**Focusing with a live image or with a focusing screen** – with the standard sliding adapter (the focusing magnifier is optional).

**Short focal lengths** – the use of a wide-angle bellows permits the use of lenses with focal lengths as short as 28 mm!

**Digital and analog** – with Hasselblad V roll film magazines and lenses with mechanical between-the-lens shutters the Sinar f3 can be used with equal ease for photography on film.
